Start with the operation

Copilot and Agent Administration Fundamentals | Tim Warner | October 27, 2026. This reference supports an instructor-led session. Attendees don't need a tenant, software installation, or repository clone.

Operation	Surface and entry point	Evidence
User entitlement	Microsoft 365 admin center > Billing > Licenses	Assigned product and intended user
Usage	Reports > Usage > Microsoft Copilot > Copilot > Usage	Reporting period, update date, enabled and active users
Metered services	Copilot > Cost management > classic Billing & usage in the inspected tenant	Billing policy, service attachment, audience
Agent distribution	Agents > All agents > Requests	Owner, data, tools, audience, permissions
Source exposure	SharePoint admin center > Reports > Data access governance	Snapshot or activity report, scope and collection state
DLP	Purview > Solutions > Data Loss Prevention > Policies	Location, rule, label, action, policy mode
Agent authoring	Copilot Studio > selected environment > agent	Instructions, knowledge, test results, publishing settings
Environment governance	Power Platform admin center	Environment, roles, connector policy

Live navigation checked October 19: Microsoft 365 admin center exposes Copilot > Cost management and a link labelled classic Billing & usage. The classic PAYG documentation still uses Billing & usage. Identify the service and billing model before following a procedure. Other paths above are documentation-verified unless the technical prep record states a live observation.

Read the evidence before making the decision

Licenses and access

A Copilot entitlement doesn't grant access to every organizational document. Check eligible prerequisites, the assigned user, application activation, and source access separately. Some apps can take up to 24 hours to reflect a new assignment. Test source access as the intended user, not only as an administrator.

Usage and adoption

The admin usage report typically becomes available within 48 hours of the end of the activity day in UTC. Read its period and update date. The Microsoft Copilot Dashboard adds an adoption and impact view where access and prerequisites are satisfied. Neither report proves that a particular answer was correct.

Identity and protection

Use the least privileged role appropriate to the operation. Keep MFA and Conditional Access in the sign-in path. Source permissions, sensitivity labels, DLP, retention, and DSPM address different problems. A simulation result isn't an enforcement result.

Release and ownership

Review the owner, purpose, knowledge, authentication, capabilities, audience, and requested permissions before distribution. Approval can involve permission consent; inspect the exact request rather than approving broadly. Keep an agent owner responsible for evaluations and withdrawal.

Reliable starting addresses

Microsoft 365: https://admin.microsoft.com | Purview: https://purview.microsoft.com | Entra: https://entra.microsoft.com | Copilot Studio: https://copilotstudio.microsoft.com | Power Platform: https://admin.powerplatform.microsoft.com. Open SharePoint from the Microsoft 365 admin-center list to use your own tenant's address.
